

**AMENDMENTS TO THE CLAIMS**

Please replace the following sections of the Specification. Applicant includes herewith a marked up version of the replacement paragraph(s), underlined and/or bracketed text indicating insertions, and strikethrough and/or double brackets indicating deletions.

**LISTING OF CLAIMS**

1. (Previously Presented) A dental instrument, comprising:  
a mirror; and  
a suction device having an inlet, through which liquid is sucked by said suction device, a reflecting surface of the mirror being passed through by an opening, which during use of the instrument forms the mouth of said inlet, the reflecting surface of the mirror being adapted to be at least partially cleaned by liquid flowing thereacross.
2. (Original) A dental instrument as claimed in claim 1, wherein said mirror is prevented from rotating during use.
3. (Previously Presented) A dental instrument as claimed in claim 1, wherein said mirror is arranged to suck up, through said opening, all liquid intended to be removed.
4. (Previously Presented) A dental instrument as claimed in claim 1, wherein said mirror extends in the manner of a flange away from said inlet.
5. (Previously Presented) A dental instrument as claimed in claim 1, wherein said mirror forms an integrated part of said instrument.

6. (Previously Presented) A dental instrument as claimed in claim 1, wherein said mirror is removably attachable to said instrument.

7. (Previously Presented) A dental instrument as claimed in claim 1, wherein said mirror is of a magnifying kind.

8. (Previously Presented) A dental instrument as claimed in claim 1, wherein said suction device comprises a tubular suction nozzle, at the inlet of which said opening in the mirror forms a mouth, and wherein said suction nozzle is curved.

9. (Previously Presented) A dental instrument as claimed in claim 4, wherein said mirror is removably attached to said suction device via a frictional coupling arrangement.

10. (Previously Presented) A dental instrument as claimed in claim 4, wherein said mirror is removably attached to a seat in said suction device via a holder.

11. (Previously Presented) A mirror comprising:  
a sleeve, adapted to couple the mirror to a suction device; and  
a reflecting surface, the reflecting surface being passed through by an opening and being adapted to receive and at least be partially cleaned by liquid sucked by the suction device.

12. (Previously Presented) The mirror of claim 11, wherein the suction device includes an inlet and is for a dental instrument, and wherein the opening, during use of the instrument, forms the mouth of the inlet.

13. (Previously Presented) A dental instrument comprising the suction device including an inlet, and the mirror of claim 11, wherein the opening, during use of the instrument, forms the mouth of the inlet.

14. (Previously Presented) The mirror of claim 11, wherein said mirror is prevented from rotating during use.

15. (Previously Presented) The mirror of claim 11, wherein said mirror is arranged to suck up, through said sleeve, all liquid intended to be removed.

16. (Previously Presented) The mirror of claim 12, wherein said mirror forms an integrated part of said instrument.

17. (Previously Presented) The dental instrument of claim 13, wherein said mirror forms an integrated part of said instrument.

18. (Previously Presented) The mirror of claim 12, wherein said mirror is removably attachable to said instrument.

19. (Previously Presented) The dental instrument of claim 13, wherein said mirror is removably attached to said suction device via a frictional coupling arrangement.

20. (Previously Presented) The dental instrument of claim 13, wherein said mirror is removably attached to a seat in said suction device via a holder.

21. (New) The dental instrument of claim 1, wherein the diameter of the opening matches the diameter of the suction device.

22. (New) The dental instrument of claim 11, wherein the diameter of the opening matches the diameter of the suction device.
